

coop-writing maximal example

EN-US

Example Author

September 24, 2026

1 Version, encoding, and engine

This source file is UTF-8 and is being compiled with pdfLaTeX. The package reports version v1.8, while coop-writing v. v1.8 prints its name and version together.

The example contains direct UTF-8 text: Xexéo, naïve, façade, São Paulo, revisão, informação, ação, and não. These Latin-script examples are part of the required pdfLaTeX/LuaLaTeX regression coverage proposed in issues #34 and #42.

2 Current localized strings

The following user-configurable strings are part of the current package surface:

- Draft title: Draft.
- Comment-list title: List of Comments.
- Subject-list title: List of Subjects.
- Citation-needs title: List of Citation Needs.
- Citation request text: Please cite.
- Default citation request message: something to support this information.
- Citation margin label: Cite.

3 Basic comments

The predefined author family creates a comment here ¹. The predefined editor family creates another one the selected phrase². Author:1
Editor:2

The custom Alice family is generated by `\cwnamedef`. First, a simple comment appears here³. A selected passage can be annotated as this text is selected⁴. Alice:3

A labeled comment is labeled selected text⁵. The current reference mechanism produces Comment 5; issues #19, #20, and #38 discuss a better semantic-ID design. Alice:4
Alice:5

A struck-through comment is kept for historical context ⁶. The labeled form is also Alice:6

¹AUTHOR:A comment from the predefined Author collaborator

²EDITOR:A comment from the predefined Editor collaborator

³ALICE:Simple Alice comment

⁴ALICE:Comment attached to selected text

⁵ALICE[ALICE-LABELLED]:This comment has a stable LaTeX label

⁶ALICE:~~This old comment is visibly resolved~~

available **old highlighted text**⁷.

Alice:7

This comment has an extra warning mark!⁸.

Alice:8

4 Suggestions, removals, and replacements

The complete generated family is exercised below.

Alice proposes an insertion: **newly proposed text**⁹.

Alice:9

Alice proposes a removal: ~~redundant old wording~~¹⁰.

Alice:10

Alice proposes a replacement: ~~an imprecise statement~~a more precise statement¹¹.

Alice:11

The Portuguese synonym generated for every collaborator is also exercised: ~~old phrasing~~new phrasing¹².

Alice:12

Bruno was defined through \cwauthor; his generated commands work in the same way. For example, a suggestion from Bruno¹³.

Bruno:13

5 Low-level note compatibility API

The commands in this section have no @ in their names and therefore are technically callable, but normal users should prefer collaborator commands.

A raw note follows¹⁴.

A color-explicit raw note follows¹⁵.

Rv:15

6 TODO behavior

The default TODO is intentionally the compact editorial-comment form:¹⁶

To do:16

The inline form is explicit:

This is the intentionally large inline TODO box.

Issue #45 records this behavior as a regression requirement.

7 Citation-needed annotations

This factual claim needs support.¹⁷

Cite:17

This second claim asks for a specific kind of source.¹⁸

Cite:18

The Portuguese alias works too.¹⁹

Cite:19

⁷ALICE[ALICE-RESOLVED]:Resolved-labeled-comment

⁸ALICE:The exclamation mark is configured globally

⁹ALICE:Proposed change

¹⁰ALICE:This phrase is redundant

¹¹ALICE:Improve precision

¹²ALICE:Same operation, Portuguese command name

¹³BRUNO:Bruno's suggestion

¹⁴REVIEWER:Low-level note created with \Cwnote

¹⁵REVIEWER[RAW-NOTE]:Low-level note created with \cwnote

¹⁶TO DO:This TODO must not become an inline box by default.

¹⁷CITE:Please cite something to support this information

¹⁸CITE:Please cite Prefer a recent peer-reviewed systematic review.

¹⁹CITE:Please cite The alias should create the same semantic item.

8 Draft material

Alternative argument

This block is provisional. It is visible in editing mode and should disappear from clean modes.

The Portuguese environment alias is demonstrated directly:

Portuguese alias

This is the same draft mechanism reached through the Portuguese alias.

9 Anonymization

The institution is wrapped directly as **Example University**.

A reusable blind-review macro expands here as **Open Editorial Project at Example University**.

The generic citation wrapper gives [1]. The parenthetical-compatible wrapper gives [1, p. 42]. The textual-compatible wrapper gives [1].

In editing mode these items are shown in the configured anonymization color; in submit mode they use the replacement strings configured in the preamble.

10 Subjects and paragraph main ideas

First subject

This paragraph begins with a subject marker.

Subject through the Portuguese alias

This paragraph demonstrates \cwassunto.

This sentence states the main idea of the paragraph. The remainder of the paragraph explains and supports it.

The emphasis macro can be used directly: **direct use of the current main-emphasis renderer.**

It can also be reconfigured with ordinary LaTeX: **This main idea is rendered in bold after redefining the emphasis hook.**

11 Mode-dependent files

The three-way input selector follows. In this editing build, the first file is used:

Mode-dependent input: editing version selected.

The mode-specific input commands are all present in the source:

Mode-dependent input: editing version selected.

The three-way include selector follows:

Included file selected for editing

This section came from the editing include file.

The mode-specific include commands are all present in the source. Only the editing one executes in this build:

Mode-dependent input: editing version selected.

12 Text-color helpers

Normal color. This text is changed with `\cwwcolor`. Normal color again.

The lower-level save helper can be used separately: magenta after an explicit `\color`; the saved color is restored.

13 A little ordinary document content

The package is intended to coexist with ordinary LaTeX structures, equations, floats, citations, and long prose. For example,

$$f(x) = x^2 + 1$$

is ordinary mathematics and should not be affected by the editorial layer.

Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

Editorial lists: canonical commands

List of Comments

3.1	Author: A comment from the predefined Author collaborator	1
3.2	Editor: A comment from the predefined Editor collaborator	1
3.3	Alice: Simple Alice comment	1
3.4	Alice: Comment attached to selected text	1
3.5	Alice: This comment has a stable LaTeX label	1
3.6	Alice: This old comment is visibly resolved	1
3.7	Alice: Resolved labeled comment	2
3.8	Alice: The exclamation mark is configured globally	2
4.0	Alice: Proposed change	2
4.1	Alice: This phrase is redundant	2
4.2	Alice: Improve precision	2
4.3	Alice: Same operation, Portuguese command name	2
4.4	Bruno: Bruno's suggestion	2
6.1	To do: This TODO must not become an inline box by default.	2
6.2	To do: This is the intentionally large inline TODO box.	2

List of Citation Needs

7.1	Plese cite something to support this information	2
7.2	Plese cite Prefer a recent peer-reviewed systematic review.	2
7.3	Plese cite The alias should create the same semantic item.	2

List of Subjects

10.1	First subject	3
10.2	Subject through the Portuguese alias	3
10.3	This sentence states the main idea of the paragraph.	3
10.4	This main idea is rendered in bold after redefining the emphasis hook.	3

Editorial lists: compatibility aliases

The following intentionally duplicate the lists above so that the maximal example exercises the legacy/underlying public aliases as well.

List of Comments

List of Citation Needs
